

The **2015 Innovative Surgical Robotics Forum** is a event jointly organised by the *Robotics and Autonomous Systems* SIG and the EU. Four EU FP7 projects (STIFF-FLOP, μ Ralp, CASCADE, and ReMeDi) leading the field of surgical robotics will exhibit their latest achievements. During this event, the aim is to identify market opportunities and the gaps between clinical, academic and industrial communities to establish a multidisciplinary community focused on the subject. We will facilitate the exploitation of robotics R&D by bringing together the different stakeholders and create the opportunity to form new partnerships and collaborative relationships.
