

The "Brain Mapping in Surgery" Symposium took place in Milan, on the 3rd of July, at Palazzo Greppi.

A total of 64 international participants, including neurosurgeons, doctors in training and engineers, have registered and participated to the event.

Different speakers, from clinical centers of Italy, France and Israel, presented their works relative to mapping of brain structures with different techniques like StereoElectroEncephaloGraphy (SEEG), implanted grid electrodes or clinical evaluation of epileptic seizures.

All the works that were exposed were very interesting and fruitful for future collaborations.

## "Brain mapping in surgery" Symposium

Università degli Studi di Milano, via S. Antonio, Milano

3rd July 2013

### Organizers:

Prof. Lorenzo Bello, Università degli Studi di Milano e Istituto Clinico Humanitas, Rozzano
