

Here you can find three database that we used in the Active project. The downloadable content is available [here](#) .

The clinical data of patients was obtained from four clinical epileptological centers: Carlo Besta Neurological Institute, Niguarda Ca Granda Hospital, San Paolo Hospital, all in Milan, Italy and Tel-Aviv Sourasky Medical Center (TASMC), Israel. All patients used in the experiments reported in the database are drug-resistant epileptic patients, who do not present any other pathology (e.g. malignant tumors). All of the patients have signed an informed consent to the treatment of their anonymized data.

Please acknowledge the ACTIVE European Project (FP7-ICT-2009-6-270460) if you use the database provided on this site.
